We had Promium create our initial EDD (which we call the Reg3 format) when we first set up the system. As Pat said, I think it works in Scribe as long as you have the correct information and they know what your column headers are which we gave them at the beginning of the project. But, now I would think the EPA Scribe version in Element would be the way to go.

We tried to create our own EDDs with the builder way back, but, at the time it was kind of tricky not knowing all of the temp tables very well… so we gave up. Maybe Promium has made the process easier by now??

Is the routine format an EDD you created with the builder?

Similar to what Robin said, during the gulf oil spill, I seem to remember them using our Region 4 "routine format" to import into Scribe. I don't recall any problems. I think Scribe was designed to be fairly flexible in that regard. As long as you keep the format consistent and it contains all the needed information, they can probably map Scribe to that format.

Our routine format for EDDs has worked for Scribe uploads. The way I understand it is that there are no Valid Values for the data that need to be matched, but, the Column header names must match...which our EDD format apparently does. I can send you a copy if that would help.

Dear LIMS users-

By now you may have seen or read about the accidental discharge along the Animas River in Colorado. Scribe is the requested data format for the inter-regional assistance project.

Can you get in touch with me if you have Promium LIMS and have used Scribe?

Thank you,

Greg
